## **HYDROLOGIC ANALYSIS**

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

The US Army Corps of Engineers (USACE) HEC-HMS model was used to develop design flows for the primary systems. The secondary systems were modeled in the Storm Water Management Model (SWMM). For each system analyzed, the hydrologic model(s) was selected based on the complexity of the stormwater conveyance system.

The US Army Corps of Engineers (USACE) HEC-HMS model was selected to model the primary systems defined as the main stems of Parkers Creek and Johnsons Mill Run. HEC-HMS simulates the surface runoff response to precipitation for an interconnected system of surfaces, channels, and ponds. Input data for the HEC-HMS model was developed using topographic, land use, and soils maps in GIS to delineate and calculate the basin areas and SCS hydrologic parameters. The HEC-HMS model offers a variety of methods for simulating the rainfall-runoff response, hydrograph development, channel and pond routing. The selection of methods for the analyses is based on the study objectives, data availability, and watershed characteristics. The precipitation data for the 24-hour duration, NRCS Type III storm was used to represent the synthetic rainfall event. The NRCS curve number approach was selected to calculate runoff volumes from the precipitation data, and the sub-basin unit hydrographs for these flood volumes were developed using the NRCS lag times. Where appropriate, reservoir routing was selected to model attenuation behind culvert embankments.

For the larger secondary systems that may: (a) have significant backwater effects from rising water surface elevations within the Primary Systems, (b) have attenuation within drainage ditches or behind roadways, and (c) show a sensitivity to the timing response of runoff to rainfall, the SWMM model developed by the US Environmental Protection Agency (EPA) was selected as the hydrologic and hydraulic model. The NRCS curve number approach was selected to calculate runoff volumes from the precipitation data, and the sub-basin unit hydrographs for these flood volumes were developed using the watershed width parameter. SWMM simulates the surface runoff response to precipitation for an interconnected system of surfaces, channels, and ponds. Input data for the SWMM model was developed using topographic data, land use data, and soils maps in GIS to delineate and calculate the basin areas and NRCS hydrologic parameters. The SWMM model offers a variety of methods for simulating the rainfall-runoff response, hydrograph development, and channel routing. One advantage to using SWMM to model both hydrology and hydraulics is that channel routing is modeled in the EXTRAN (hydraulics) block automatically based on the geometry and nature of the conveyance system. This eliminates the need to iterate between a hydrologic model and a hydraulic model to produce reasonable flows. **Table A-1** lists the different systems and the modeling methodology applied to each system.

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

**Table A-1: Project Area Model Selection**

Project Area	Model Selection
Parkers Creek Main Stem	HEC-HMS
Parkers Creek Lateral 1	HEC-HMS
Parkers Creek Lateral 2	HEC-HMS
Johnsons Mill Run Primary System	HEC-HMS
Countryside/Oak Grove Estates System	SWMM
Greenfield Terrace System	SWMM
Haw Drive System	SWMM

### **Watershed Delineation and Connectivity**

Watersheds were delineated for the Primary Systems and for each of the five (5) secondary systems utilizing digital LiDAR data available from the State of North Carolina and the stormwater inventory. The preliminary watersheds were created using automated procedures in a GIS platform and then adjusted as necessary based on the conveyance system and known ridge lines. Each flood control project watershed for the Primary Systems was subdivided into sub-watersheds selected at hydrologically and hydraulically significant points, such as major roadway crossings, stream convergences, known problem areas, etc. Each sub-watershed for the secondary systems was selected as the area that drained to each inlet modeled on the secondary system. Sixteen (16) sub-watersheds were delineated for the Primary Systems ranging in size from 20 to 346 acres. Sub-watersheds were delineated as necessary for the secondary systems to accurately model the hydraulics of the system. The watershed maps included in Appendix C illustrate the sub-watershed and hydrologic connectivity for the primary system.

### **Soils**

The NRCS curve number method uses basin characteristics, such as soil types and land use, to compute the runoff response. The infiltration rate of a soil influences the volume of surface runoff that results from given storm events. Soils with high infiltration rates produce lower runoff than soils with lower infiltration rates. The Soil Conservation Service has prepared soil maps for Pitt County that identify four primary soil groups. This data is available digitally and was obtained for the City of Greenville.

The groups (A, B, C, and D) correspond to decreasing rates of infiltration. A general description of the four soil groups taken from the USDA, SCS, NEH-4 (1972) is presented in **Table A-2**.

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

**Table A-2: Hydrologic Soils Groups**

Soil Group	Description
A	Group A soils have high infiltration rates even when thoroughly wetted and consist chiefly of deep, well to excessively drained sand or gravels. These soils have a high rate of water transmission. (greater than 0.3 inches per hour)
B	Group B soils have moderate infiltration rates even when thoroughly wetted and consist chiefly of moderately deep to deep, moderately well to well drained soils with moderately fine to moderately coarse texture. These soils have a moderate rate of water transmission. (0.15 to 0.3 inches per hour)
C	Group C soils have slow infiltration rates when thoroughly wetted and consist chiefly of soils with a layer that impedes downward movement of water, or soils with moderately fine to fine texture. These soils have a slow rate of water transmission. (0.5 to 0.15 inches per hour)
D	Group D soils have a very slow infiltration rate when thoroughly wetted and consist chiefly of clay soils with a high swelling potential, soils with a permanent high water table, soils with a clay pan or clay layer at or near the surface, and shallow soils over nearly impervious material. These soils have a very slow rate of water transmission. (0 to 0.05 inches per hour)
A/D	The first letter applies to the drained condition and the second to the undrained condition. For the purpose of hydrologic soil group, adequately drained means that the seasonal high water table is kept at least 60 centimeters (24 inches) below the surface.
B/D	The first letter applies to the drained condition and the second to the undrained condition. For the purpose of hydrologic soil group, adequately drained means that the seasonal high water table is kept at least 60 centimeters (24 inches) below the surface.

Soils within the watershed are predominantly NRCS hydrologic soil groups A and D soils, although six (6) different hydrologic soil groups are represented in some quantity in the watersheds (See **Table A-3** and Appendix C).

**Table A-3A: Area Distribution of Hydrologic Soil Groups – Parkers Creek**

Soil Group	Total Area (acre)	Percent of Total Area
A	2,618	38.5%
B	146	2.1%
C	91	1.3%
D	3,824	56.3%
Water	115	1.7%

B	134	0.8%
C	658	3.9%
D	13,797	81.8%
Water	127	0.8%

#### **Land Use**

Land use is the watershed cover condition as it relates to the actual type of development and zoning within the watershed. Land use influences the runoff characteristics of a watershed, and combined with other basin characteristics, is used to determine the SCS curve number for the basin.

The existing zoned land uses for the watersheds were provided by the City of Greenville. These zoning maps were used to develop peak flows for the watershed. Nine land use categories were delineated within the PC Watershed and eleven in the JMR Watershed based on the information provided and field observation of the current uses (see Appendix C).

In its entirety, the PC/JMR Watershed covers an area of approximately 23,670 acres (37 square miles). The majority of the basin is not currently developed to its zoned land use. Build-out conditions land use were developed based on current zoning. Percentages of each existing land use group and the correlating acreage are listed in **Table A-4** below and future land use in Table A-5.

**Table A-4A: Parkers Creek Watershed Existing Land Use**

#### **NRCS Curve Numbers**

The NRCS curve number approach was used in computing the runoff response. Runoff curve numbers (RCNs) were generated by using the NRCS (SCS) document entitled Urban Hydrology for Small Watersheds, dated June 1986 and commonly referred to as TR-55. This method relates

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

the drainage characteristics of the hydrologic soil group, land use category, and antecedent moisture conditions (AMC) to a runoff curve number. The runoff curve number and an estimate of the initial surface moisture storage capacity are used to calculate a total runoff depth for a storm in a basin.

The AMC refers to the total rainfall in a 5-day period preceding a storm and relates to the soil moisture condition at the beginning of the storm event. The AMC value can be used as a calibration tool in the hydrologic computations where AMC-1 represents "dry" conditions and AMC-3 represents "wet" conditions. The average antecedent moisture conditions (AMC-2) are generally considered most representative for the humid southeastern portion of the country and were used for the hydrologic calculations in this study.

Runoff curve numbers were determined for each sub-basin based on the soil group, land use, and average antecedent moisture condition for the area. The curve numbers calculated for this study are listed in **Table A-6** below.

**Table A-6: Curve Numbers Based on Land Use and Soil Groups**

Land Use Category	Soil Group			
	A	B	C	D
Commercial	89	92	94	95
Office/Institutional/Multifamil	77	85	90	92
High Density Residential	61	75	83	87
Medium Density Residential	54	70	80	85
Low Density Residential	51	68	79	84
Conservation/Open Space	49	69	79	84
Agricultural/Cropland	67	78	85	89
Right-of-Way	83	89	92	93

For each sub-basin, the curve number was determined and weighted by area to calculate the composite curve number for each sub-basin. A summary of the hydrologic input data for the Primary Systems, including the runoff curve numbers, is shown in **Table A-7**. The detailed calculations are included in Appendix E (runoff curve numbers) and Appendix F (times of concentration).

#### Rainfall

Rainfall distributions for Greenville are derived using the NRCS Type III standard distribution. Total rainfall volumes for the modeled frequency storms were based on data published on the NOAA website, [http://hdsc.nws.noaa.gov/hdsc/pfds/orb/nc\\_pfds.html](http://hdsc.nws.noaa.gov/hdsc/pfds/orb/nc_pfds.html). **Table A-8** shows the total rainfall volumes used for this study based on precipitation data collected in Greenville, North Carolina

**Table A-8: Design Storm Rainfall Depths**

Design Storm	Rainfall Depth (in)
2-year, 24-hour	3.76
10-year, 24-hour	5.81
25-year, 24-hour	7.23
50-year, 24-hour	8.47
100-year, 24-hour	9.84

While the depth-duration-frequency curves are calculated based on real rainfall data, the rainfall data used for the SWMM and HEC-HMS models represent the Type III synthetic rainfall distribution. Actual runoff is based on several factors including rainfall intensity, duration and the antecedent moisture conditions of the watershed.

#### Hydrograph Translation

The lag time, as defined by the NRCS for use in the NRCS dimensionless unit hydrograph method, is the time, or lag, between the center of mass of rainfall excess and the peak of the unit hydrograph. The lag time is based on the sub-watershed time of concentration, or travel time, and is a function of the sub-watershed size, shape, slope, cover, and other basin characteristics. For the NRCS method, the sub-watershed lag time is calculated to be 0.6 times the time of concentration for each sub-watershed.

The Snyder Unit Hydrograph (UH) method was used instead of the SCS UH to allow adjustment of the peak rate factor in the HMS model. For flat coastal plain terrain, a peak rate factor between 250-350 is most appropriate for the SCS UH (Sheridan et al, 2002). A peaking factor of 0.4 was applied with the Snyder UH method which is essentially equivalent to using the NRCS UH with

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

the lower peak rate factor.

The times of concentration for the sub-watersheds were calculated from the methodology described in TR-55. A summary of the calculations is shown in Appendix F. The longest flow path is divided into three types of flow; overland flow, shallow concentrated flow, and channel flow. A spreadsheet was developed to tabulate the incremental travel times for each type of flow for each sub-basin. The incremental travel times were totaled and multiplied by 0.6 to compute the lag time for each sub-basin. The equation detailing the travel time for sheet flow is as follows:

$$T_t = \frac{0.007 (nL)^{0.8}}{(P_2)^{0.5} s^{0.4}}$$

T<sub>t</sub> = Travel Time in hours

n = Manning Roughness Coefficient (Paved=0.011, Unpaved=0.24)

L = flow length in feet

P<sub>2</sub> = 2-year, 24 hour rainfall = 3.76 inches

S = slope of hydraulic grade line (land slope in ft/ft)

For shallow concentrated flow, the velocity (V) is calculated for either paved or unpaved sections by using the following equations:

$$\begin{aligned} \text{Unpaved } V &= 16.1345 (S)^{1/2} \\ \text{Paved } V &= 20.3282 (S)^{1/2} \end{aligned}$$

The travel time for shallow flow is then calculated by dividing the flow length (L in feet) by velocity as follows:

$$T_t = \text{Travel Time} = L / (3600 * V)$$

The open channel travel times are determined by a modified version of the Manning equation, which is as follows:

$$V = \frac{1.49 R^{2/3} S^{0.5}}{n}$$

V = Average full-flow velocity

(ft/s) R = Hydraulic radius (ft)

S = Slope of hydraulic grade line

(ft/ft) n = Manning roughness coefficient

Instead of a time of concentration parameter, the SWMM model uses a watershed width parameter to create the unit hydrograph used in the model that will translate the rainfall into

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

runoff. The watershed width is a parameter unique to SWMM that typically represents the watershed area divided by the longest flow path. The width parameter is typically calibrated to flow gauge data, if available. The PC/JMR Watershed lacks flow gauge data, so the peak flows from SWMM were compared to flows developed using the regression equations. Based on the flow comparison, the watershed widths for each basin were increased in some instances to produce reasonable flows. Increasing the watershed width parameters is not an uncommon practice for calibrating models for areas with gradual slopes and moderate conveyance systems.

For the remainder of the smaller sub-watersheds of the secondary systems concentration values were assumed to be between 5 and 15 minutes.

#### **Channel Elements**

Flood peaks attenuate, or reduce, as they travel downstream due to the storage characteristic of the stream reach. The Muskingum-Cunge routing method in HEC-HMS was selected to define the storage characteristic of selected stream reaches in the PC/JMR Watersheds. It can be described as a hydrologic routing method based on physical parameters of the channel and floodplain. Input data for this method consists of representative channel/floodplain sections, reach length, Manning's roughness coefficient, and channel bed slope. This method provides advantages over other hydrologic techniques based on the relative size and slope of the channels and floodplains in the watershed.

#### **Structure and Pond Routing**

For channels within the extents of the HEC-RAS modeled streams, modified Puls storage routing was used for routing hydrographs through the storage reaches. This method accounts for storage upstream from undersized structures (culverts) as well as most accurately throughout all reaches using the channel and floodplain dimensions included in the HEC-RAS model. HEC-HMS is able to model the effects of an undersized culvert through inputs defining the relationship between water volume or area and elevation and the relationship between outflow and water surface elevations. The relationship between outflow and water surface elevations is developed using an iterative process between HEC-HMS and HEC-RAS. A rating curve generated using HEC-RAS defines the outflow of the water leaving this system.

However, the method described in the previous paragraph does not account for the reduction in tailwater on the structure due to the attenuation effects of the upstream storage, which in turn can affect the stage-discharge relation of the structure. Therefore, an iterative process for storage structures was followed with an objective to obtain a set of peak discharge values, runoff volumes, and water surface elevations that are "balanced" between the two models. The process was initiated by inputting a set of discharges into the HEC-RAS model to develop a set of discharge-storage relations for each reach. This initial set of relations was input into the HEC-HMS model. These values were supplemented by the depth-storage relation for each structure.

The HEC-HMS model was run with these values to derive new discharges at downstream

## APPENDIX A

### HYDROLOGIC ANALYSIS

---

locations. These new values were input into the HEC-RAS model and it was recomputed. The new discharges and water surface elevations listed in the HEC-HMS summary output were compared with the discharges listed in the previous HEC-RAS run. When the values stabilized, the model was considered "balanced". If not then additional iterations were performed. Typically, three iterations are adequate to derive a balanced model.

#### **Summary of Hydrologic Model Results**

The HEC-HMS model was used to compute peak runoff for the 2-, 10-, 25-, 50- and 100- year design storms for the existing conditions.

The results of the hydrologic model are summarized in **Table A-9** for existing conditions and **Table A-10** for future conditions. The HEC-HMS input and output are included in Appendix H. Additionally, a CD is included in Appendix J and contains the digital files for the HEC-HMS model.

#### Comparison of Peak Flows

For comparison purposes, flood peaks were estimated using the U.S. Geological Survey (USGS) publication entitled "The National Flood-Frequency Program – Methods for Estimating Flood Magnitude and Frequency in Rural and Urban Areas in North Carolina – USGS Fact Sheet 007-00" (2001) at key locations within the watershed. **Table A-11** compares the peak flows determined from the USGS regional regression equations the Coastal-Plain region versus the peak flows from HEC-HMS.

### HYDROLOGIC ANALYSIS

**Figure B-2** Approximate geographic boundaries for NRCS (SCS) rainfall distributions

Source: TR-55 (June, 1986)

## **APPENDIX B**

## **HYDRAULIC ANALYSIS**

## APPENDIX B

### HYDRAULIC ANALYSIS

The purpose of the hydraulic modeling analysis is to determine an existing level of flooding for the stormwater drainage network and to develop proposed solutions to mitigate flooding, on both the primary systems and the secondary systems. Three different modeling methodologies were used depending on the complexity and location of the conveyance system. For the primary systems comprised of Parkers Creek and Johnsons Mill Run, the Hydrologic Engineering Center River Analysis System (HEC-RAS) was used for hydraulic modeling. For secondary systems, the Storm Water Management Model (SWMM) developed by the US Environmental Protection Agency (EPA) was used to calculate the hydraulic grade lines using an energy grade based approach. Table B-1 lists the project areas that were modeled using each approach.

**Table B-1: Project Area Model Selection**

Project Area	Model Selection
Parkers Creek Primary System	HEC-RAS
Parkers Creek Tributary 1 Primary System	HEC-RAS
Parkers Creek Tributary 2 Primary System	HEC-RAS
Johnsons Mill Run Primary System	HEC-RAS
Countryside/Oak Grove Estates System	SWMM
Greenfield Terrace System	SWMM
Haw Drive System	SWMM

#### **HEC-RAS Model**

The HEC-RAS model calculates water surface profiles for steady, gradually varied flow, both sub-critical and supercritical, for user-specified discharges. The standard step backwater analysis for sub-critical flow was modeled for the Parkers Creek and Johnsons Mill Run Primary Systems. The model calculates the effect of obstructions, such as culverts, and building structures in the channel and floodplain on the water surface profile. The hydraulic computations are based on the solution of a one-dimensional energy equation with energy loss due to friction evaluated by Manning's equation.

Input data for the HEC-RAS computer model includes the following:

- Cross-section geometry of the channel and floodplain.
- Roughness coefficients to describe the characteristics of the channel and floodplain.
- Size, shape, and characteristics of culverts and roadways along the stream reach.
- Energy loss coefficients for flow in the channel and at roadway crossings.

#### **Primary System Study Limits**

As discussed with City of Greenville stormwater staff, study limits for the hydraulic evaluation of the primary systems include Parkers Creek from its confluence with the Tar River at the downstream end to approximately 1,700 feet upstream of the Highway 264 northwest access entrance ramp and Johnsons Mill Run from its confluence with the Tar River at the downstream end to approximately 2,800 feet upstream of Mount Pleasant Church Road.

## APPENDIX B

### HYDRAULIC ANALYSIS

---

#### **Stormwater Inventory**

For the Parkers Creek/Johnsons Mill Run PC/JMR Watershed Master Plan, stormwater utility infrastructure throughout the watershed was collected by CDM Smith personnel to compile a Geographic Information System (GIS) stormwater inventory database for the City. This was accomplished by using Global Positioning Systems (GPS) as the primary means of data capture. CDM Smith employed survey grade GPS to locate the x, y, and z coordinates of each visible stormwater system structure and conventional surveying techniques to obtain other attributes including but not limited to size, material, slope, and length. Additionally, attributes were also collected for select streams and open channel. Data was obtained for those streams and open channels required to complete connectivity for modeling purposes. The data was collected using horizontal datum NAD 1983 and vertical datum NAVD 1988.

Attributes collected as part of the inventory were used to populate the various models. Field visits and digital photographs for each structure and channel were used to estimate the roughness coefficients and energy loss coefficients. The topographic data used for the PC/JMR Watershed Master Plan was the State of North Carolina's LiDAR data.

#### **Cross Sections**

Cross section surveys had recently been completed for sections of both Parkers Creek and Johnsons Mill Run as part of the State's floodplain mapping program. These surveyed cross sections were augmented with additional cross sections surveyed by CDM Smith. The surveyed cross section points were then merged with the digital elevation model based on the LiDAR data. Cross sections were located perpendicular to the flow and at intervals along the stream to characterize the flow capacity of the channel and floodplain for the primary system. Along stream reaches where the shape, size, and geometry of the cross-section are varying, cross sections were cut at closer intervals than for reaches having little change in channel characteristic. Additional sections were cut as required by the HEC-RAS program to sufficiently model structures such as culverts.

Surveyed cross sections are identified by station number, which for the HEC-RAS model, refers to the approximate linear distance upstream from a reference point on the main channel or tributary reach. The cross sections depict the locations of cut sections from field topographic surveys. Similarly, the cross section at each road crossing represents the top-of-road cross section. The cross sections just upstream and just downstream of highest point of roadway (commonly referred to as the weir) represent the locations of the upstream and downstream faces, respectively, of the bridge or culvert in an area not impacted by roadway fill.

#### **Roughness Coefficients**

Manning's roughness coefficients, or 'n' values, represent the resistance to flow and influence the flow capacity of channels and floodplains. The HEC-RAS model uses these coefficients to compute friction loss longitudinally in the channel and floodplain. The roughness value is a function of the type and density of the vegetation, channel bottom and stream bank material, degree of channel meandering, and depth of flow.

Roughness coefficients were determined for all stream reaches for which hydraulic analyses were performed. The "horizontal variation in n-values" option was enabled to allow for correct modeling of the widely varied surfaces on a given cross-section. For example, many cross-

## APPENDIX B

### HYDRAULIC ANALYSIS

---

sections sufficient to represent the roughness of the floodplain and channel in the study area, one for the channel section, one for the right overbank floodplain, and one for the left overbank floodplain. The right or left bank of the stream is referenced facing downstream. Roughness coefficients used in this study are listed in Table B-2.

**Table B-2A: Roughness Coefficients – Parkers Creek**

Location	Range of 'n' values
Main Channel	0.04 - 0.065
Left Overbank	0.06 - 0.15
Right Overbank	0.03 - 0.15

**Table B-2B: Roughness Coefficients – Parkers Creek Lateral I (south)**

Location	Range of 'n' values
Main Channel	0.04 - 0.055
Left Overbank	0.035 - 0.12
Right Overbank	0.035 - 0.12

**Table B-2C: Roughness Coefficients – Parkers Creek Lateral I (south)**

Location	Range of 'n' values
Main Channel	0.045
Left Overbank	0.06 - 0.10
Right Overbank	0.03 - 0.10

**Table B-2D: Roughness Coefficients – Johnsons Mill Run**

Location	Range of 'n' values
Main Channel	0.055 - 0.065
Left Overbank	0.06 - 0.15
Right Overbank	0.06 - 0.15

All roughness coefficients were estimated through field observation and by referencing standard engineering manuals.

#### **Culvert and Roadway Data**

Culverts generally have different characteristics than the channel and floodplains away from roadway crossings. Often culverts constrict flood flows in the channel and floodplain, which may create backwater effects upstream of the structure. The constriction can produce increased velocities and result in localized scour.

For culvert analysis, the HEC-RAS model utilizes the concepts of "inlet" control and "outlet" control to simplify complicated culvert hydraulics. Inlet control flow occurs when the flow carrying capacity of the culvert entrance is less than the flow capacity of the culvert barrel. Outlet control flow occurs when the culvert carrying capacity is limited by downstream conditions or by the flow capacity of the culvert barrel.

## APPENDIX B

### HYDRAULIC ANALYSIS

During inlet control computations, the culvert inlet acts as either a weir or an orifice, and the resulting headwater is computed. The equations used by HEC-RAS are the same as those developed by the Federal Highway Administration during extensive laboratory testing, which describe the inlet control headwater under various conditions.

For outlet control flow conditions, the required headwater is computed considering various conditions. For culverts flowing full, a form of the Bernoulli Equation, which considers friction losses, entrance losses and exit losses is utilized. Friction losses are based on Manning's equation. Entrance losses are computed as a coefficient times the velocity head in the culvert at the upstream end. Exit losses are computed as a coefficient times the change in velocity head from just inside the culvert (at the downstream end) to outside the culvert.

When the culvert is not flowing full, the direct step backwater procedure is used to calculate the profile through the culvert up to the culvert inlet. An entrance loss is then computed and added to the energy inside the culvert to obtain the upstream headwater. Culvert input data for the HEC-RAS model include:

- Shape and dimensions of the structure openings;
- Culvert length;
- Entrance loss coefficient, exit loss coefficient and coefficient of discharge for weir flow during roadway overtopping;
- Upstream and downstream invert elevations;
- Federal Highway Administration chart number for the culvert type;
- Top-of-road elevations to describe the weir during roadway overtopping and the weir crest length; and
- Four cross sections are required; one cross section sufficiently downstream of the culvert that flow is not affected by the culvert, one at the downstream end of the culvert, one at the upstream end of the culvert, and one located far enough upstream that the culvert has no effect on flow.

#### **Energy Loss Coefficients**

Contraction and expansion of flow produces energy losses caused by the transition. The magnitude of these losses is related to the velocity and the estimated loss coefficient. Where the transitions are gradual, the losses are small. At abrupt changes in cross-sectional area, the losses are higher. Energy losses resulting from expansion are greater than losses associated with contraction. Energy loss coefficients used for the watershed hydraulic models are presented in Table B-3.

**Table B-3: Energy Loss Coefficients**

Type of Transition	Expansion	Contraction
None	0	0
Gradual	0.3	0.1
Culvert sections	0.5	0.3

#### **Starting Water Surface Elevation**

The starting water surface elevations for the Parkers Creek and Johnsons Mill Run HEC-RAS models were calculated using the slope-area method, which is based on normal depth. The

## APPENDIX B

# HYDRAULIC ANALYSIS

---

calculated slopes are as follows:

- Parkers Creek – 0.0004 feet/feet;
- Parkers Creek Lateral 1 – 0.0005;
- Parkers Creek Lateral 2 – 0.0005; and
- Johnsons Mill Run – 0.005 feet/feet

### **Model Run Descriptions and Assumptions**

The HEC-RAS model was used to compute flood elevations at each cross-section for Parkers Creek and Johnsons Mill Run Primary System for the 2-, 10-, 25-, 50- and 100-year floods. A hard copy of the HEC- RAS input and output is included in Appendix H, while a digital copy of the input and output is located on the CD in Appendix J.

The hydraulic analysis for this study is based only on the condition of unobstructed flow. Therefore, flood elevations shown on the profiles are considered valid only if hydraulic structures remain unobstructed and do not fail. Flood elevations may be raised by debris blockage of the culvert, channel, or floodplain.

### **Model Validation**

Efforts were made to verify the models for various storm events. Feedback obtained from the questionnaires was reviewed for relevant information that could be used to verify the model. The comments and responses received were not specific enough to verify the model. Likewise, the information received during the public meetings was not useful for the purposes of verifying the models. The City Staff was able to provide some feedback that was useful during the model validation process.

During the validation process, the flows and water surface elevations calculated were determined to be significantly higher than the FEMA flow and base flood elevations. Furthermore, the results from the initial existing conditions model were not aligned with some of the feedback received from the City. At this point, the decision was made to use a Type III NRCS Storm versus a Type II. The Type III storm was selected based on the location of the City of Greenville. It is located close to the boundary of between Type II and III. The results presented in this report have incorporated this change.

### **Open Channel Systems and Roadway Flooding**

Thirteen (13) crossings were analyzed for flooding potential in the PC/JMR Watershed Master Plan. All roadway crossings that were analyzed in this study are listed in Tables B-5A and B including the minimum top-of-road elevations and the 2-, 10-, 25-, 50- and 100-year flood elevations at the crossing for existing and proposed conditions.

## APPENDIX B

### HYDRAULIC ANALYSIS

#### **SWMM**

SWMM is a dynamic rainfall-runoff model capable of modeling the hydrologic response of a watershed and hydraulic routing throughout a stormwater conveyance system. The model calculates the effect of backwater, flat or negative slopes, energy losses, and minor headlosses associated with bends, entrances and exits.

Input data for the EPA SWMM (hydraulics) computer model include the following:

- Conveyance pipes including structure inverts, pipe sizes and lengths;
- Open channel cross section geometries;
- Roughness coefficients for pipes and channels;
- Energy loss coefficients for flow in the pipes and channels;
- Storage rating curves; and
- Overland flow characteristics.

SWMM provides an accurate evaluation of the existing and proposed conditions because it combines hydrology and hydraulics while accounting for the routing effects of the channel and over bank storage areas. Because hydrology and hydraulics are combined, changes to peak flows or water surface elevations resulting from proposed modifications to the existing channels or culverts are calculated in the model in one step. Additionally, changes to flows from proposed pipes and channel improvements are seen both upstream and downstream, reducing the potential for a stormwater system having increased flooding downstream.

#### **Energy Loss Coefficients**

Contraction and expansion of flow produces energy losses caused by the transition. The magnitude of these losses is related to the velocity and the estimated loss coefficient. Where the transitions are gradual, the losses are small. At abrupt changes in cross-sectional area, the losses are higher. Energy losses resulting from expansion are greater than losses associated with contraction. Energy loss coefficients used for the hydraulic SWMM models are presented in Table B-6 below:

**Table B-6: Energy Loss Coefficients for SWMM Models**

Type of Transition	Expansion	Contraction
None	0	0
Manhole/Inlet	0.7	0.5
Open Channel	1	0.5–Headwall/ 0.9 - Projecting

Additional energy losses for structures having bends were divided between the two joining pipes. The bend losses used for this project are based on NCDOT values, and are shown below in Table B-7.

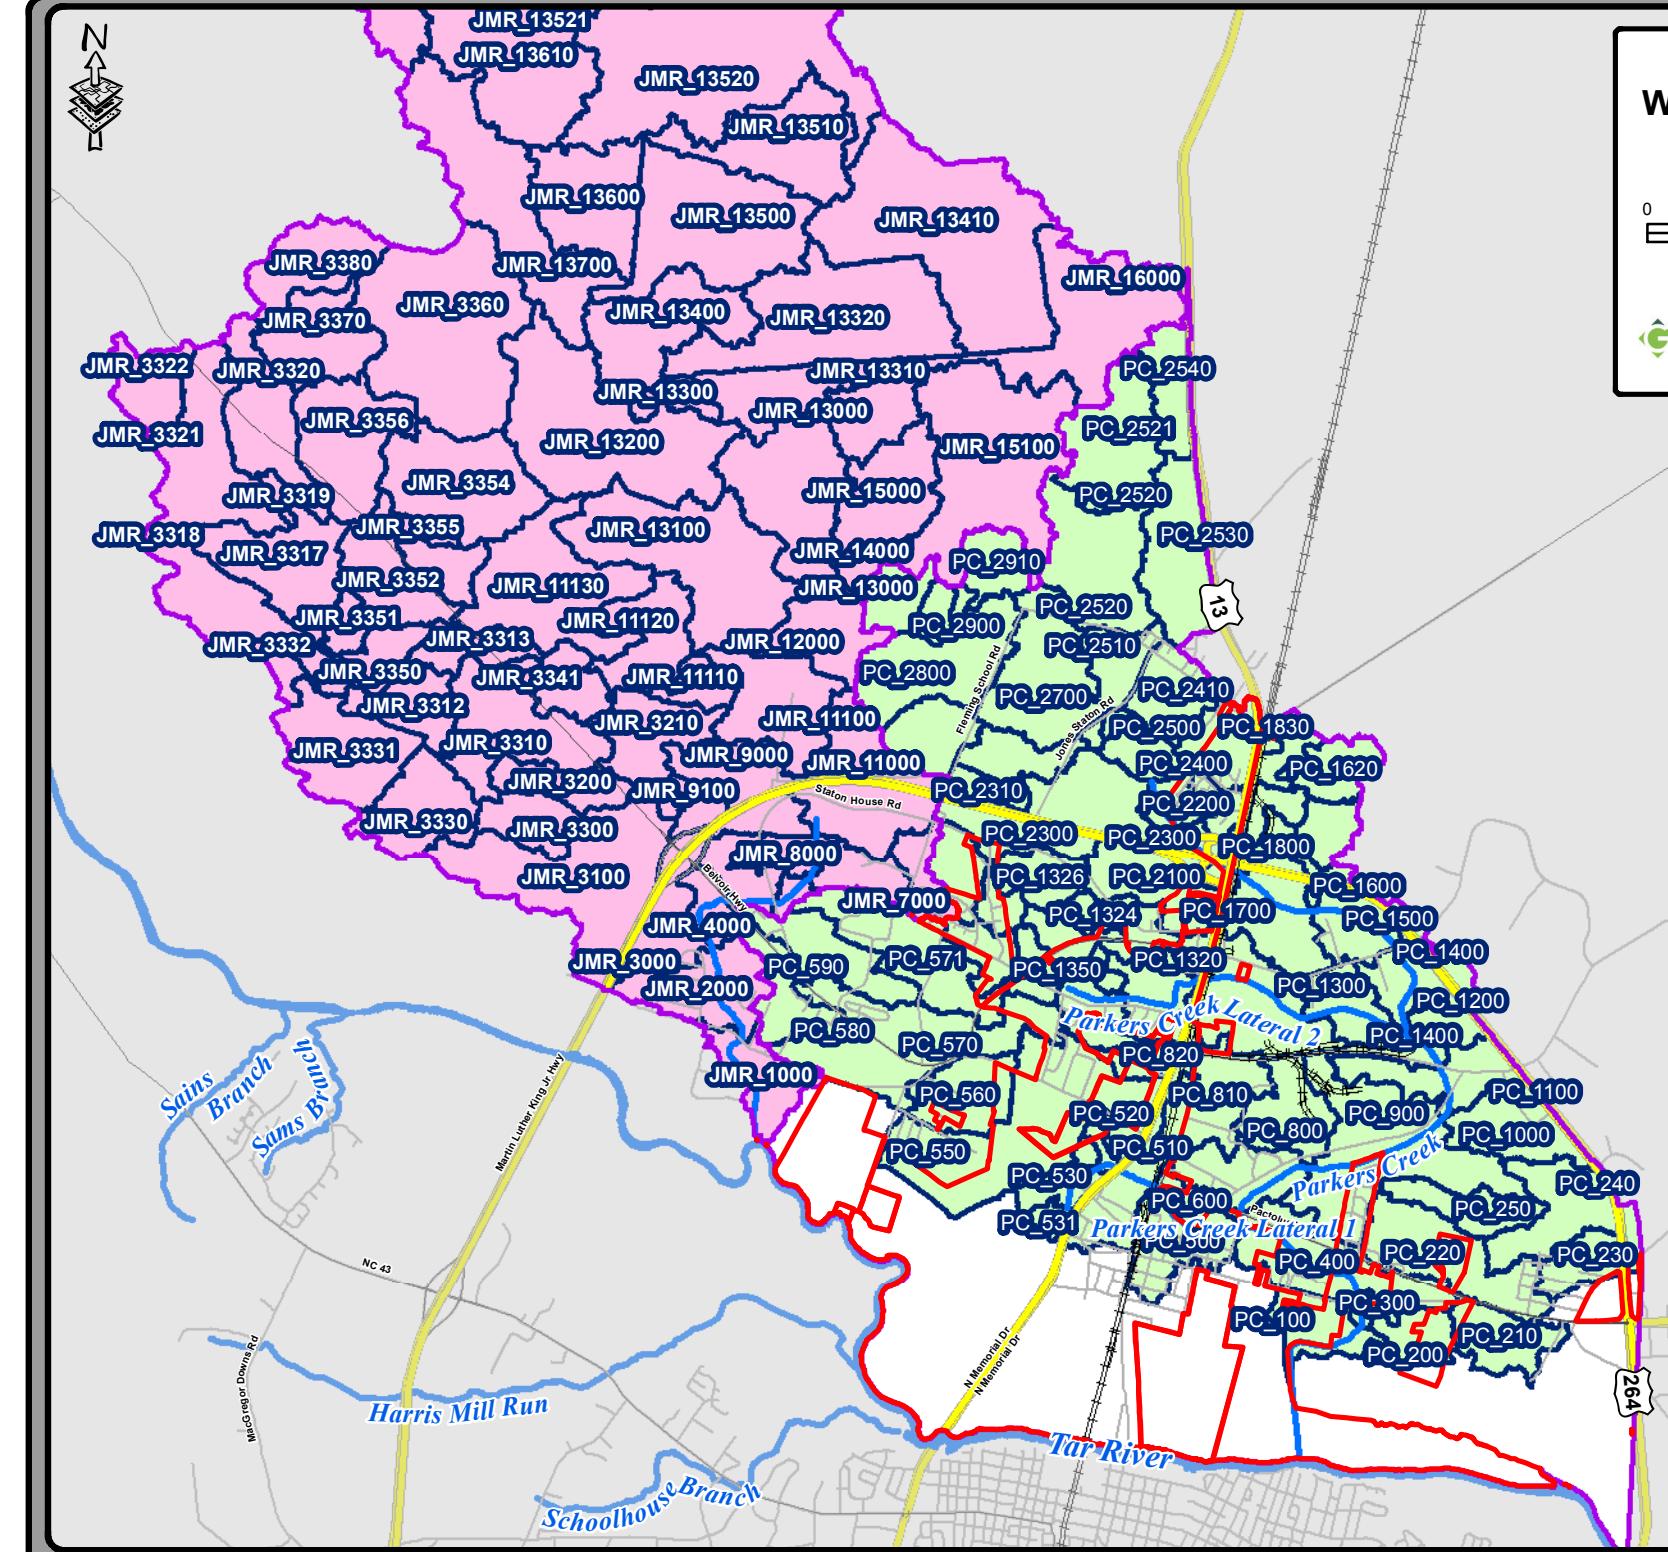

**Table B-7: Bend Loss Coefficients**

Angle (°)	Loss Coefficient	Angle (°)	Loss Coefficient
90	0.70	40	0.38
80	0.66	30	0.28
70	0.61	25	0.22
60	0.55	20	0.16
50	0.47	15	0.10

### Citizen Input – Results of Surveys

Table D-1: General Survey Results

Survey Question Number	Question	Survey Response		
		Yes	No	Maybe
2	Have you ever experienced flooding on your property during a (non-Hurricane) storm?	9	5	-
3	Have you ever noticed flooded streets in your neighborhood?	11	2	-
4	Has flooding increased on your property due to the filling of lots adjacent to, or near, your property?	6	5	-
5	Have you had any erosion on your property?	5	8	-
6	If a cost-sharing program was made available along with training, would you be willing to install a stormwater BMP (e.g. rain garden, cistern, backyard wetland, etc.)?	4	4	6
7	Are you aware that the City of Greenville is currently analyzing and looking for possible solutions to erosion, flooding and water quality issues throughout the City with a watershed master planning process?	6	7	-
8	Are you aware of how the City of Greenville currently spends or utilizes its stormwater utility fee?	1	13	-

Table D-2: Frequency and Location of Flooding Question and Responses (Question 2)

Frequency of Flooding	Flooding Location						
	Storage Building	Air Conditioning	Crawl Space	Living Space	Yard Flooding from Stream/Ditch	Yard Flooding from Street Runoff	Yard Flooding From Adjacent Property
Not Specified	1	1	2	1	1	1	2
Less than once a year							
Once a year							
2-3 times a year							
More than 3 times a year	1	1	2		4	3	2
Every time it rains					1	2	1

**Table D-3: Threatened by Erosion (Question 5)**

Item	Number of Responses
Street	3
Yard	4
Building/House	1
Fence	2
Other	3

**Table D-4: Willingness to Participate in a Stream Maintenance Program (Question 6)**

Item	Number of Responses
Yes	4
No	4
Maybe	6

**Table D-5: How should City utilize funds to address stormwater runoff issues (Question 9)**

Item	Number of Responses
Develop cost-sharing program for installation of water harvesting practices to reduce stormwater flows	4
Develop incentives for replanting riparian areas (directly adjacent to streams)	5
Develop a program to address erosion on private property	3
Construct and maintain regional detention facilities to store stormwater	8
Stream restoration	6
Buyout of endangered properties	3
Other	2

**APPENDIX G**  
**PRELIMINARY OPINION OF PROBABLE**  
**CONSTRUCTION COST**

**City of Greenville, NC - Watershed Masterplan**  
**Summary of Unit Costs**

No	Description	Unit	Unit Cost
1	Mobilization (10%)	LS	
2	Comprehensive Grading (20%)	LS	
3	Excavation	CY	\$ 25.00
4	Hauling	CY	\$ 4.00
5	Clearing & Grubbing	AC	\$ 5,000.00
6	Channel Grading including seeding	SY	\$ 15.00
7	Construction Staking (Less than 300000)	LS	\$ 3,000.00
8	Construction Staking (300000-800000)	LS	\$ 6,000.00
9	Construction Staking (Greater than 800000)	LS	\$ 10,000.00
10	Select Material	CY	\$ 25.00
11	Flowable Fill	CY	\$ 500.00
12	12" R.C. Pipe Culvert, Class III	LF	\$ 45.00
13	15" R.C. Pipe Culvert, Class III	LF	\$ 50.00
14	18" R.C. Pipe Culvert, Class III	LF	\$ 55.00
15	18" R.C. Pipe Culvert, Class IV	LF	\$ 60.00
16	24" R.C. Pipe Culvert, Class III	LF	\$ 70.00
17	24" R.C. Pipe Culvert, Class IV	LF	\$ 75.00
18	30" R.C. Pipe Culvert, Class III	LF	\$ 90.00
19	30" R.C. Pipe Culvert, Class IV, 0' - 6' depth	LF	\$ 100.00
20	36" R.C. Pipe Culvert, Class III	LF	\$ 120.00
21	36" R.C. Pipe Culvert, Class IV	LF	\$ 130.00
22	36" Steel Pipe Culvert (Tunnel Installation)	LF	\$ 800.00
23	42" R.C. Pipe Culvert, Class III	LF	\$ 150.00
24	42" R.C. Pipe Culvert, Class IV	LF	\$ 165.00
25	48" R.C. Pipe Culvert, Class III	LF	\$ 180.00
26	48" R.C. Pipe Culvert, Class IV	LF	\$ 195.00
27	48" Steel Pipe Culvert (Tunnel Installation)	LF	\$ 1,100.00
28	54" R.C. Pipe Culvert, Class III	LF	\$ 200.00
29	60" R.C. Pipe Culvert, Class III	LF	\$ 225.00
30	60" Steel Pipe Culvert (Tunnel Installation)	LF	\$ 1,500.00
31	66" R.C. Pipe Culverts, Class III	LF	\$ 260.00
32	72" R.C. Pipe Culvert, Class III	LF	\$ 320.00
33	72" R.C. Pipe Culvert, Class IV	LF	\$ 370.00
34	72" Steel Pipe Culvert (Tunnel Installation)	LF	\$ 1,800.00

Subtotal, Items 1-17:	\$ 382,100
30% Contingency	\$ 114,630
<b>Total \$</b>	<b>496,730</b>
Design, Administration, Fiscal and Legal (30% of Construction Costs)	\$ 149,019
<b>Total Opinion of Project Cost \$</b>	<b>650,000</b>

\* Cost for comprehensive grading includes roadway excavation, saw cutting, compaction of select material, geotechnical recommendations, home owner coordination, tree and structure protection, structure removal and disposal, shoring and culvert excavation.

\*\* Cost for utility conflicts include all utilities that need to be moved including sanitary sewer and potable water lines. Additional survey may be required to locate pressurized utilities

The Engineer's opinions of probable construction costs are made on the basis of the Engineer's experience and qualifications and represent the Engineer's best judgement as a professional generally familiar with the construction industry. Since the Engineer has no control over the cost of labor, materials, equipment, or services furnished by others, over the contractors methods of determining prices;or over competitive bidding or marketing conditions, the Engineer's cannot and does not guarantee that proposal, bids or actual construction costs will not vary from opinions of probable construction costs prepared by the Engineer.

11	Erosion Control (Greater than 5 acre LOD)	1	LS	\$ 50,000	\$ 50,000

Subtotal, Items 1-11	\$ 12,805,700
30% Contingency	\$ 3,841,710
<b>Total</b>	<b>\$ 16,647,410</b>
Design, Administration, Fiscal and Legal (30% of Construction Costs)	\$ 4,994,223
<b>Total Opinion of Project Cost</b>	<b>\$ 21,650,000</b>

**Notes:**

Regional pond 1 is south of Hwy 264 downstream of Memorial Drive and is 60 acres.

An excavation depth of 6 feet is assumed for this estimate for a total volume of 580,000 cy.

The unit cost for excavation is reduced from \$25/cy to \$20/cy assuming a scale factor or use in nearby DOT project as fill.

\* Cost for comprehensive grading includes roadway excavation, saw cutting, compaction of select material, geotechnical recommendations, home owner coordination, tree and structure protection, structure removal and disposal, shoring and culvert excavation.

\*\* Cost for utility conflicts include all utilities that need to be moved including sanitary sewer and potable water lines. Additioanl survey may be required to locate pressurized utilities

The Engineer's opinions of probable construction costs are made on the basis of the Engineer's experience and qualifications and represent the Engineer's best judgement as a professional generally familiar with the construction industry. Since the Engineer has no control over the cost of labor, materials, equipment, or services furnished by others, over the contractors methods of determining prices;or over competitive bidding or marketing conditions, the Engineer's cannot and does not guarantee that proposal, bids or actual construction costs will not vary from opinions of probable construction costs prepared by the Engineer.

Project: ParkersCreek

Simulation Run: 10YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 25YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 50YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 100YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 2YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 2-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Project: JohnsonsMillRun

Simulation Run: 10YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Project: JohnsonsMillRun

Simulation Run: 25YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 50YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 100YR-EX(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-EX(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

**PRIMARY SYSTEM  
FUTURE  
CONDITIONS:  
HEC-HMS OUTPUT**

Project: ParkersCreek

Simulation Run: 2YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 2-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 10YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 25YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 50YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: ParkersCreek

Simulation Run: 100YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 2YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 2-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 10YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 25YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Project: JohnsonsMillRun

Simulation Run: 50YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: JohnsonsMillRun

Simulation Run: 100YR-FU(Sny)

Start of Run: 01Apr2015, 00:00

Basin Model: Johnsons Mill Run-FU(Snyder)

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

**PRIMARY SYSTEM  
ALTERNATIVES:  
HEC-HMS OUTPUT**

Project: Parkers-HMS

Simulation Run: 2YR-ALT1

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt1

End of Run: 03Apr2015, 00:00

Meteorologic Model: 2-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 10YR-ALT1

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt1

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 25YR-ALT1

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt1

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 50YR-ALT1

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt1

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 100YR-ALT1

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt1

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 2YR-ALT2

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt2

End of Run: 03Apr2015, 00:00

Meteorologic Model: 2-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 10YR-ALT2

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt2

End of Run: 03Apr2015, 00:00

Meteorologic Model: 10-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 25YR-ALT2

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt2

End of Run: 03Apr2015, 00:00

Meteorologic Model: 25-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 50YR-ALT2

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt2

End of Run: 03Apr2015, 00:00

Meteorologic Model: 50-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

Project: Parkers-HMS

Simulation Run: 100YR-ALT2

Start of Run: 01Apr2015, 00:00

Basin Model: Parkers Creek-Alt2

End of Run: 03Apr2015, 00:00

Meteorologic Model: 100-YR

Compute Time: 16Dec2015, 12:40:34

Control Specifications: Control 1

Hydrologic Element	Drainage Area (MI2)	Peak Discharge (CFS)	Time of Peak	Volume (IN)

# Existing Conditions (10-Year)

EPA STORM WATER MANAGEMENT MODEL - VERSION 5.1 (Build 5.1.007)

\*\*\*\*\*

NOTE: The summary statistics displayed in this report are based on results found at every computational time step, not just on results from each reporting time step.

\*\*\*\*\*

\*\*\*\*\*

## Analysis Options

\*\*\*\*\*

Flow Units ..... CFS

### Process Models:

Rainfall/Runoff ..... YES

RDII ..... NO

Snowmelt ..... NO

Groundwater ..... NO

Flow Routing ..... YES

Ponding Allowed ..... NO

Water Quality ..... NO

Infiltration Method ..... CURVE\_NUMBER

Flow Routing Method ..... DYNWAVE

Starting Date ..... APR-17-2015 00:00:00

Ending Date ..... APR-17-2015 23:45:00

Antecedent Dry Days ..... 0.0

Report Time Step ..... 00:05:00

Wet Time Step ..... 00:01:00

Dry Time Step ..... 01:00:00

Routing Time Step ..... 5.00 sec

Variable Time Step ..... YES

Maximum Trials ..... 8

Head Tolerance ..... 0.005000 ft

\*\*\*\*\*

## Element Count

\*\*\*\*\*

Number of rain gages ..... 1

Number of subcatchments ... 115

Number of nodes ..... 390

Number of links ..... 541

Number of pollutants ..... 0

Number of land uses ..... 0

\*\*\*\*\*

## Raingage Summary

\*\*\*\*\*

Name	Data Source	Data Type	Recording Interval
SCS_Rain	SCSStorms	VOLUME	15 min.

\*\*\*\*\*

## Subcatchment Summary

\*\*\*\*\*

Name	Area	Width	%Imperv	%Slope	Rain Gage
Outlet

# Future Conditions (10-Year)

EPA STORM WATER MANAGEMENT MODEL - VERSION 5.1 (Build 5.1.007)

---

\*\*\*\*\*

NOTE: The summary statistics displayed in this report are based on results found at every computational time step, not just on results from each reporting time step.

\*\*\*\*\*

\*\*\*\*\*

## Analysis Options

\*\*\*\*\*

Flow Units ..... CFS

### Process Models:

Rainfall/Runoff ..... YES

RDII ..... NO

Snowmelt ..... NO

Groundwater ..... NO

Flow Routing ..... YES

Ponding Allowed ..... NO

Water Quality ..... NO

Infiltration Method ..... CURVE\_NUMBER

Flow Routing Method ..... DYNWAVE

Starting Date ..... APR-17-2015 00:00:00

Ending Date ..... APR-17-2015 23:45:00

Antecedent Dry Days ..... 0.0

Report Time Step ..... 00:05:00

Wet Time Step ..... 00:01:00

Dry Time Step ..... 01:00:00

Routing Time Step ..... 5.00 sec

Variable Time Step ..... YES

Maximum Trials ..... 8

Head Tolerance ..... 0.005000 ft

\*\*\*\*\*

## Element Count

\*\*\*\*\*

Number of rain gages ..... 1

Number of subcatchments ... 115

Number of nodes ..... 390

Number of links ..... 541

Number of pollutants ..... 0

Number of land uses ..... 0

\*\*\*\*\*

## Raingage Summary

\*\*\*\*\*

Name	Data Source	Data Type	Recording Interval
SCS_Rain	SCSStorms	VOLUME	15 min.

\*\*\*\*\*

## Subcatchment Summary

\*\*\*\*\*

Name	Area	Width	%Imperv	%Slope	Rain Gage
Outlet

EPA STORM WATER MANAGEMENT MODEL - VERSION 5.1 (Build 5.1.007)

\*\*\*\*\*

NOTE: The summary statistics displayed in this report are based on results found at every computational time step, not just on results from each reporting time step.

\*\*\*\*\*

\*\*\*\*\*

## Analysis Options

\*\*\*\*\*

Flow Units ..... CFS

### Process Models:

Rainfall/Runoff ..... YES

RDII ..... NO

Snowmelt ..... NO

Groundwater ..... NO

Flow Routing ..... YES

Ponding Allowed ..... NO

Water Quality ..... NO

Infiltration Method ..... CURVE\_NUMBER

Flow Routing Method ..... DYNWAVE

Starting Date ..... APR-17-2015 00:00:00

Ending Date ..... APR-17-2015 23:45:00

Antecedent Dry Days ..... 0.0

Report Time Step ..... 00:05:00

Wet Time Step ..... 00:01:00

Dry Time Step ..... 01:00:00

Routing Time Step ..... 5.00 sec

Variable Time Step ..... YES

Maximum Trials ..... 8

Head Tolerance ..... 0.005000 ft

\*\*\*\*\*

## Element Count

\*\*\*\*\*

Number of rain gages ..... 1

Number of subcatchments ... 115

Number of nodes ..... 385

Number of links ..... 525

Number of pollutants ..... 0

Number of land uses ..... 0

\*\*\*\*\*

## Raingage Summary

\*\*\*\*\*

Name	Data Source	Data Type	Recording Interval
SCS_Rain	SCSStorms	VOLUME	15 min.

\*\*\*\*\*

## Subcatchment Summary

\*\*\*\*\*

Name	Area	Width	%Imperv	%Slope	Rain Gage
Outlet

Node Surcharge Summary
\*\*\*\*\*

Surcharging occurs when water rises above the top of the highest conduit.

# BRIDGE INSPECTION REPORT

INSPECTION TYPE: Routine Inspection

COUNTY PITT BRIDGE NUMBER 730059 INSPECTION CYCLE 2 YRS  
ROUTE NC33 ACROSS PARKERS CREEK M.P. 0

LOCATION 0.1 SE JCT SR 1529

SUPERSTRUCTURE 2 BRLS.12X12 RCBC;67' ALONG CENTERLINE OF CULVERT

SUBSTRUCTURE

SPANS

LONGITUDE 77° 21' 48.09" LATITUDE 35° 38' 29.33"

INSPECTION DATE 09/03/2013 PRESENT CONDITION GOOD

PRESENT POSTING N NOT POSTED PROPOSED POSTING

OTHER SIGNS PRESENT NONE

LOOKING EAST

Fracture Critical	No
Temporary Shoring	No
Scour Critical	No
Scour POA	No

SIGN NOTICE ISSUED FOR	NUMBERED REQUIRED
No WEIGHT LIMIT	
No DELINEATORS	
No NARROW BRIDGE	
No ONE LANE BRIDGE	
No LOW CLEARANCE	

## NATIONAL BRIDGE INVENTORY----- STRUCTURE INVENTORY AND APPRAISAL

# **FIELD INSPECTION REPORT**

## Bridge Inspection & Analysis

Team Leader **BG LITTLETON, JR.**

Assisted By **PD IPOCK**

Item No.	Grade	
2a	G	(RC DECK)  HL TO 1/16" LONGITUDINAL CRACKS EXTEND FROM BT 2 COMPRESSION SEAL IN SPANS 2 & 3, LT LANE. SIMILAR AT OTHER LANES & SPANS.
3a	F	DECK IN SPAN 2 & 3 HAS TRANSVERSE CRACKS TO 1/16" ADJACENT TO BENT 2 JOINT. SIMILAR CRACKS NEAR BENT 1 IN SPANS 1 & 2.  (RC RAILING)
6c	F	HL CRACKS, SOME W/EFFLO THRU OUT INTERIOR & EXTERIOR FACES. (PHOTO)  (COMPRESSION SEALS)
7	F	DEBRIS AT SHOULDER SECTIONS OF ALL COMPRESSION SEALS. (PHOTO)  LOCATED OVER END BENTS 1 & 2 AND INTERIOR BTS 1 & 2.  (DECK DEBRIS)
10	G	DEBRIS ALONG THE RT RAIL WITH SIGNS OF PONDING. MINOR DEBRIS ALONG THE LT RAIL. (PHOTO)  (STEEL PLATE GIRDERS)
10A	NO	NO NOTEWORTHY DEFECTS.  (CURVED GIRDERS)
12	G	NO CURVED GIRDERS  (INTERIOR DIAPHRAGMS)
13	G	NO NOTEWORTHY DEFECTS.  (CURTAIN WALLS)
16	F	RANDOM HL CRACKS, SOME WITH EFFLO.  (DRAINAGE)
52	G	RESTRICTED BY DEBRIS WITH SIGNS OF PONDING. (PHOTO)  (PAINT SYSTEM)
36a	G	WEATHERING STEEL WITH BEAM ENDS PAINTED WITH WATER BASED ACRYLIC. NO NOTEWORTHY PROBLEMS. (PHOTO)  (CONCRETE CAPS)
		END BENT 2 CAP HAS HL CRACKS UNDER BAY 1. SIMILAR CRACKS THRU OUT ALL CAPS.  DEBRIS ON TOP OF CAPS.

**FIELD INSPECTION REPORT****Bridge Inspection & Analysis**Team Leader **BG LITTLETON, JR.**Assisted By **PD IPOCK**

Item No.	Grade	
36b	G	(CONCRETE COLUMNS)  NO NOTEWORTHY DEFECTS.
36d	G	(CONC RETAINING WALLS)  HL MAP CRACKS NOTED IN THE RETAINING WALLS.
39	G	(SLOPE PROTECTION)  NO NOTEWORTHY PROBLEMS AT SLOPE PROTECTIONS.
50	G	SHRUBS AT THE SW CORNER OF THE WEST APPROACH BEGINNING TO ENCROACH BEYOND THE GUARDRAIL. (PHOTO) (APPROACH ROADWAY)
51	F	NE APPROACH CURB IS CRACKED AT END PORTION. (PHOTO) (APPROACH SLABS)
54	G	WEST APPROACH SLAB HAS HL LONGITUDINAL & MAP CRACKS. SIMILAR CRACKS AT THE EAST SLAB. (PHOTO) (RESPONSE TO LIVE LOAD)
62	NO	DEFLECTION AT SPANS UNDER TTST. (PRESENTLY POSTED)  NOT POSTED

## **BRIDGE INSPECTOR'S RECOMMENDATION FOR MAINTENANCE REPAIRS**

Bridge: 730464

County PITT

Date: 09/16/2013

**These Repairs Should Be Made Within Twelve Months From Date Of This Inspection**

MMS Code	Description of Function	Unit	Quantity	Remarks	Est. Cost
2910	Manual Brush and Tree Control	LF	30	SHRUB OVERTAKING SW GUARDRAIL	
3310	Maintenance/Repair/Replacement of Standard Bridge Expansion Joints	LF	196	DEBRIS AT SEALS WITH SIGNS OF LEAKAGE	
3348	Maintain Concrete Substructure Components	LF	200	DEBRIS ON CAPS	
3376	Clean/Wash Bridge Decks	SF	100	DEBRIS ALONG RAILS WITH PONDING

\*Raw numbers are shown in left side of column and weighted numbers are provided in right side of column. Totals are based on weighted numbers.

#### Prioritization process for capital projects

To develop a systematic procedure for implementing proposed capital projects across the City, a quantitative prioritization process is critical. Table 15 includes a list of categories with associated scores to aid in the prioritization process. Weights are given to the most critical factors and a composite score is developed for each project. In the final capital plan for each watershed, the projects are then ranked based on the weighted scores.

**Table 15. Capital Project Prioritization Matrix**

Category	General Description	Score	Evaluation Criteria
Public Health and Safety	Evaluates potential impact of flooding on public health and safety. Generally, refers to flooding in and around habitable structures.	5	Flood water depth and/or velocity completely surrounds and threatens the structural integrity of habitable structures or vehicles. Finished Floor Flooding Occurs during the design storm.
		3	Flood water surrounds structure but does not cause imminent danger. Crawl space and HVAC units are flooded.
		1	Yard flooding occurs and flood waters are near HVAC, crawl spaces or foundations.
		0	Minor yard flooding may occur but habitable structure is not directly affected.
Severity of Street Flooding (City Owned)	Evaluates impact of flood depths to or through an area	5	Street spread requirements are not met and are so severe that the street becomes impassable during the design storm or street flooding has spread into private Flooding is noted on NC DOT roads as a result spread issues on adjacent town owned street.
		3	Street spread requirements are not met and the streets are passable only through the center of the street. Flooding noted on collector and local streets.
		1	Spread requirements exceeded but street flooding is considered minor nuisance for traffic.
		0	Spread requirements are met.
Cost Effectiveness	Evaluates the benefit/cost of the proposed improvements	5	Project benefit ratio is greater than 1.5
		3	Project benefit ratio is between 0.5 and 1.5
		1	Project benefit ratio is between 0.075 and 0.5
		0	Project ratio is less than 0.075
Effect of Improvements	Evaluates the number of drainage issues resolved and the number of citizens positively affected	5	Multiple major drainage issues are being resolved through the proposed improvements such as street spread and increased drainage capacity.
			Proposed improvements would resolve major drainage issues for more than 5 properties.
		3	Single drainage issue is being resolved and it is considered major. Proposed improvements would resolve drainage issues for 3-5 properties.
		1	Single drainage issue is being resolved and it is considered major. Proposed improvements would resolve drainage issues for 2-3 properties.
		0	Single drainage issue is being resolved and it is considered minor. Proposed improvements would resolve drainage issue(s) for a single property at most.
Water Quality /Quantity	Evaluates the impact a BMP would have on water quality, water quantity and NPDES Phase II Compliance	5	Provides both water quantity and water quality benefits. Does not use manufactured or proprietary BMP technology. Incorporates some form of green solution such as infiltration, LID, sustainability etc. Is considered a BMP retrofit.
		3	Provides water quality benefits but does not provide water quantity benefit. Is considered a BMP retrofit.
		1	Improvements will have minimal impacts on water quality and would primarily serve as a demonstration project. Is considered a BMP retrofit.
		0	Improvements will have no measurable impact on water quality and would serve only as a demonstration project.

Category	General Description	Score	Evaluation Criteria
Open Channel - Erosion Control	Evaluates the severity of erosion control issues and impact on water quality	5	Severe erosion problems are evident and are contributing significantly to water quality issues.
		3	Moderate erosion problems are evident and are contributing to water quality issues.
		1	Minor erosion control issues are evident and are contributing to water quality issues.
		0	Minor erosion control issues are evident and are not contributing to water quality issues in a significant way.
Implementation Constraints	Considers potential constraints that may either delay or make the project too difficult to construct. Some examples would include significant permitting issues, high mitigation costs, numerous easement needs, required partnering with other communities or the NCDOT, or railroads.	5	Only minor local or state permits required. Does not involve ACOE, DWQ or FEMA. Proposed improvements can be completed without permanent or temporary easements. Project can proceed independent of other stormwater improvements identified in the master plan.
			Requires State and Federal permits that are typically easy to obtain such as Nationwide permits, FEMA No Rise etc. Primarily requires temporary easements with only a few permanent easements needed to build the project. Improvements may have limited coordination with other projects such as DOT widening, GUC utility improvements or down stream drainage improvements. <u>Significant delays in the schedule due to this</u> Project can proceed independent of other stormwater improvements identified in the master plan.
			Project is self mitigating or requires very minor mitigation.
		1	Numerous permits required including federal, state and local agencies. Examples would include an individual permit or FEMA CLOMR/LOMR. Extensive permanent and temporary easements are required. Project can not proceed independent of other stormwater improvements identified in the master plan.
Grant Funding	Evaluates the availability and potential to receive grant funding	5	Project qualifies for multiple grants. Grant does not require significant match (20% match or less) Town does not have an open grant from the agency providing the funding. Project meets all ranking criteria and will score highly in most if not all categories.
		3	Project qualifies for only one type of grant funding. Grant requires match between 20% and 50% range. Town has an open grant from agency providing the funding. Project meets most if not all of the ranking criteria and will score high in key categories.
		1	Project qualifies for only one type of grant funding. Grant requires match equal to or greater than 50%. Town has an open grant from agency providing the funding.
		0	Project meets some of the ranking criteria and may score high in one or two categories.
Constructability	Evaluates relative constructability of the project including site constraints, traffic and neighborhood impacts, and impacts on adjacent property owners.	5	Limited to no site constraints. Limited to no utility conflicts. Limited to no impacts on adjacent property owners.
			Limited to no impacts on traffic or surrounding neighborhoods.
		3	Some site constraints exist but are considered fairly minor. Some utility conflicts exist but are routine and do not require major utility relocation. Some traffic and neighborhood impacts occur but are fairly minor. Examples include temporary lane closures, occasional hauling or traffic detours through adjacent neighborhoods.
		1	Site constraints exist and are fairly major. Utility conflicts exist and require rerouting or relocation of existing utilities. Traffic and neighborhood impacts occur and are fairly major. Examples included extended road closures or hauling operations.

To calculate the project benefit ratio used in evaluating the cost effectiveness, the following steps were taken for each project location:

1. The weighted scores for the Public Health and Safety, Severity of Street Flooding, and Effect of Improvements categories were added together.
2. The sum of the three categories was divided by the total project cost.
3. The quotient was multiplied by a common multiplier, 5,000, to determine the benefit ratio.
4. The value was then assigned a score based on the evaluation criteria shown below for the cost effectiveness criteria.

<b>Score</b>	<b>Evaluation Criteria</b>
5	Project benefit ratio is greater than 1.5
3	Project benefit ratio is between 0.5 and 1.5
1	Project benefit ratio is between 0.075 and 0.5
0	Project ratio is less than 0.075

5. The applicable weighting factor is then applied to the score. The final number obtained is listed in the project prioritization matrix.

CATEGORY	Public Health and Safety	Severity of Street Flooding (Public ROW)	Effect of Improvements	Total Project Cost	Benefit Ratio	Raw Score
<b>Primary System Projects</b>						
N. Greene Street Crossing (Parkers Creek Lateral 1)	30	10	0	\$646,000	0.310	1
Memorial Drive Crossing (Parkers Creek Lateral 2)	50	30	30	\$1,164,000	0.473	1
<b>Secondary System Projects</b>						
Countryside/Oak Grove System (Parkers Creek Lateral 2)	30	30	30	\$585,000	0.769	3
Haw Drive/Airport System (Parkers Creek Lateral 2)	10	30	30	\$331,000	1.057	3
Greenfield Terrace System (Parkers Creek Lateral 2)	30	30	18	\$454,000	0.859	3
Greenfield Terrace Park Detention Wetland (Parkers Creek Lateral 2)	30	30	30	\$4,961,000	0.091	1
<b>Stream Stabilization Projects</b>						
Parkers Creek North Channel Stabilization	0	0	0	\$265,000	0.000	0
River Park North Channel Stabilization (Parkers Creek)	0	0	0	\$200,000	0.000	0
Greenfield Terrace Park Channel and Buffer Enhancement	0	0	0	\$142,000	0.000	0
<b>Water Quality Projects</b>						
Welcome Middle School Wetland and Bioretention (Parkers Creek)	0	0	0	\$142,000	1.122	3
Greenfield Terrace Park WQ Wetland (Parkers Creek Lateral 2)	0	0	0	\$212,000	0.769	3
Staton Road Aquatics and Fitness Center Bioretention (Parkers Creek)	0	0	0	\$112,000	4.598	5
East Carolina Vocational Center (Parkers Creek Lateral 2)	0	0	0	\$140,000	2.170	5
Church Street Bioretention (Parkers Creek Lateral 1)	0	0	0	\$197,000	0.372	1

<b>Weight Factor</b>	<b>Criteria</b>
10	Public Health and Safety
	Severity of Street Flooding (City Owned)
	Cost Effectiveness
6	Effect of Improvements
	Water Quality - BMP and Erosion Control
	Implementation Constraints
	Grant Funding
3	Construction Impacts
	Constructability

The above table presents the weighting factors that will be applied to the prioritization criteria, with the reason being that some criteria are viewed as more important (i.e. deserve a higher weighting) than others. So each score of each prioritization criteria will be multiplied by the assigned weight factor for that prioritization criteria category as shown in the Priority Matrix.

#### BMP Loading Reductions for Benefit Ratio

To calculate the BMP project benefit ratio used in evaluating the cost effectiveness, the following steps were taken for each project location:

1. The site drainage area impervious and pervious areas were entered into the NCDENR Coastal Plain loading calculator.
2. The loadings for Nitrogen and Phosphorus removed by the proposed BMP were entered into the table.
3. The pounds per acre per year removed were calculated (lb/ac/yr).
4. The Benefit Ratio was calculated by dividing the lb/ac/yr by 35,000 to bring into range of 0-5.

Score	Evaluation Criteria
5	Project benefit ratio is greater than 1.5
3	Project benefit ratio is between 0.5 and 1.5
1	Project benefit ratio is between 0.075 and 0.5
0	Project ratio is less than 0.075

5. The applicable weighting factor is then applied to the score. The final number obtained is listed in the project prioritization matrix in the cost effectiveness column.

	Catchment Areas (ac)			(lb/ac/yr) from Coastal Plain Worksheet			\$/(lb/ac/yr)	Benefit Ratio
	Cost	Pervious	Impervious	N Removal	P Removal	Combined N&P		
Welcome Middle School Wetland and Bioretention	\$142,000	1.53	0.78	2.6	0.31	2.91	\$ 33,810	1.04
Greenfield Terrace Park WQ Wetland (Parkers Creek)	\$212,000	52.63	8.51	1.12	0.17	1.29	\$ 24,173	1.45
Staton Road Aquatics and Fitness Center Bioretention	\$112,000	0.18	0.86	6.74	0.74	7.48	\$ 8,278	4.23
East Carolina Vocational Center (Parkers Creek Lateral 2)	\$140,000	2.67	6.14	5.38	0.67	6.05	\$ 17,370	2.02
Church Street Bioretention (Parkers Creek Lateral 1)	\$197,000	22.39	7.60	1.69	0.32	2.01	\$ 98,010	0.36
